Although it is now February, almost March, the language ranking numbers below were actually run in January in keeping with our roughly quarterly pace for updates. As we have done since 2011, we're repeating the analysis originally performed by Drew Conway and John Myles White in December of 2010. The rankings are derived from a correlation of programming traction on GitHub and Stack Overflow.

Because of the number of languages now included in the survey and because of the nature of the plot, the above can be difficult to process even when rendered full size. Here then is a simple list of the Top 20 Programming Languages as determined by the above analysis.
