The birth of Ubuntu is possibly, pivotal to the Linux history. Reason? Without Ubuntu, possibly we won't have heard the names of 50% distros in the Distrowatch top 100 list! You will find all kinds of Ubuntu derived distros there - mostly spiced up Ubuntu which work right out of the box with all free and non-free multimedia codecs and restricted softwares loaded in them! However, last week I came across a different kind of Ubuntu derivative which strictly uses free softwares only, as defined by the Free Software Foundation guidelines! Originally Trisquel is a Spanish distro (with English language option thankfully - otherwise the world would have missed a really wonderful distro!).

On free software part, possibly, I am not so emotionally attached as the developers or free software advocates. So, my review is completely focused on functionality and performance of Trisquel without getting really involved on the free-software bit. I definitely support their cause but in this review I treated Trisquel just like any other Linux distro.
