Submitted by fieldyweb on Saturday 4th of May 2013 02:46:32 PM Filed under [Linux](#) [1]

Being a few months in with my Acer C7 Chromebook as my only laptop i've very pleased with what it does, I do have the Crouton Ubuntu chroot installed and upgraded the device to 16Gb of Ram, however there is one core thing I miss with this setup. VMWare/Virtualbox. I find i'm often building virtual machines, usually Ubuntu to test bsh scripts or build LAMP Environments to test some PHP out with. That isn't something i'm able to do even on the CHROOT Ubuntu environment.

All however is not lost, and i've found a way to get round this..
