LibreOffice? Pfft. OpenOffice? Blah. KOffice? Dead for a while now. Calligra Suite? Now we're talking!

Calligra Suite

You may be a bit confused as to what Calligra Suite is, in fact you may not have ever even heard of it before now. Essentially Calligra Suite is a fork of the KOffice project from back in 2010 and has now become the de facto group of KDE publishing/office applications, as KOffice isn't really being developed any more. It consists of the following applications:

- Words (word processor)
- Sheets (spreadsheet)
- Stage (presentation)
- Kexi (visual database)
- Plan (project management)
- Braindump (notetaking and mindmapping)
- Flow (flowchart)
- Karbon (vector graphics editor)
- Krita (digital painting and image editing)
- Author (e-book authoring)

For the purposes of this post I'm going to be going over the first three which I think are the most commonly used day-to-day applications.
