Submitted by srlinuxx on Monday 1st of July 2013 01:04:41 PM Filed under [Linux](#) [1]

Welcome to this year's 26th issue of DistroWatch Weekly! Peppermint OS is an interesting distribution that combines the light nature of Lubuntu with user-friendly additions from Linux Mint, and it even adds a handful of cloud-released features. The recently-released version Four is the culmination of the project's three years of hard work; DistroWatch's Jesse Smith takes a look at the achievements.

In the news section, Fedora developers give "Schrödinger's Cat" a green light for release on Tuesday and Ubuntu continues to integrate the Mir display server into the upcoming release of its flagship distribution, although Kubuntu and Lubuntu leaders resist the switch. Also in this issue, a brief roundup of Mandriva forks and their current states, an interview with ThinkPenguin's Christopher Waid about "libre" hardware, and the usual regular sections, including an introduction to a useful Lubuntu-based distribution called LXLE.
