New KDE 4.10.5 is more like Windows than ever. Fresh new warning says "The key sequence 'Del' is ambiguous. Use 'Configure Shortcuts' from the 'Settings' menu to solve the ambiguity. No action will be triggered." Great, after 14 years of using KDE and the Del key to delete unwanted mail, all of a sudden said Del key is ambiguous. What's ambiguous about Del? Del means delete. No means no....

Update: No, it won't let me configure Del to delete mail. It wants me to use the menu to move to trash.
