Have you seen that article titled ?[How Linux owns the Internet](#) [2]?? It is basically a list that is supposed to prove how good Linux is, because it is Linux servers that ?are hosting the world?s largest Search Engines and Web Portals?.

Most of those heavyweights champions of ?Free as in Freedom? software are the same companies currently under scrutiny for the privacy risks of their business models, and for making the kind of spying and abuses exposed by E. Snowden much easier to implement.

[Rest here](#) [3]
