Recently I've been experimenting with a Raspberry Pi (revision  running different GNU/Linux distributions.

Since the Pi is a basically a mini-computer, I decided to take it for a spin and see what I could throw at it, and I have been pleasantly surprised. In fact, it's been so successful that I've decided to try setting it up as a mini server with various services. In doing so, I've come up with a list of advantages that I feel are very compelling.
