Ubuntu is planning to develop its own file manager which will be introduced with their QT5 powered Unity8 desktop environment from Ubuntu 14.10 onwards. Ubuntu is currently using Nautilus File manager (also known as 'Files'), developed by GNOME developers. Ubuntu users & developers are growing increasingly unhappy with the direction at which Nautilus file manager is leading. There are many necessary features which are missing in latest Nautilus, forcing users to replace Nautilus with their favourite file manager like feature-rich nautilus fork, Nemo or the popular Thunar - which is inarguably one of the best file managers.
