Some amazing news came down the pipeline today, from Ricardo Salveti of Canonical Ltd., for Ubuntu touch users and developers. Updates to the X86 emulator surfaced, which include increased TLS (Transport Layer Security) measures, and use of Qt packages that will be compatible with OpenGL 2.0. The combination of Qt packages and OpenGL ES 2.0 should produce sleeker rendering and font. Use of Open GL 2.0 brings programmable rendering pipelines, similar in fashion to OpenGL 3.0
