Black is based on a proprietary security architecture that Boeing calls "PureSecure." Like Samsung's Knox platform, it has a "trusted boot" mode that can detect and thwart any attempt to root the device or disable it if it can't. In addition to onboard media encryption for internal storage, the phone can be configured to inhibit certain functions based on location or the network it is connected to in order to prevent data loss. It might also be used to disable the device's camera in secure facilities.
