Many of our readers will already know that as Android is built using the Linux Kernel as its foundation, companies that manufacture smartphones, and mobile processors that run Android must provide source code. This is because the Linux Kernel (and many other libraries that Android depends upon) is licensed using the GPL (the GNU General Public License) which, in a nutshell, requires those that use GPL code or software to redistribute their changes and such in the same manner. This sort of practice is what allowed Open Source Software to take off in the first place, and keeps free software getting better and better and of course keeps things free for users like us.
