Productivity is very important. With a boost in productivity we save time and we get more work done in short period. That is why today in factories the production lines are automated. Productivity boosting is also important in everyday computer usage. No matter if you are just an regular desktop user, power user, developer or podcaster, with a boost in productivity you can save time, get more done and even also save some disk space, CPU and RAM usage. Many people do not know that there are some excelent opensource applications for increment the productivity. Some of them come as standard GNU tools with every Linux based operating system and other are standard parts from every major Linux distribution.

Idea behind this article is to cover some softwares that will be helpful for regular desktop users and also for small companies and offices.
