Just days before its first Project Ara Developer Conference is scheduled to begin, Google has released the device's Module Developers Kit (MDK), a set of plans and documentation designed to get hardware hackers started building modules for the componentized, mix-and-match experimental smartphone.

Google first unveiled Project Ara in 2013 as a research project within its Motorola Mobility division. But although it's in the process of selling off most of Motorola to Lenovo, the Chocolate Factory has kept Ara in-house, where it appears to be moving full steam ahead.
