Intel is chasing ARM the U.K. company whose processor designs are used in most tablets today, including those running both Android and Apple's iOS.

According to report Intel shipped 5 million tablet chips this year, but revenue from its Mobile and Communications Group fell 61 percent year over year. That's partly because of the subsidies and the need to focus for now on the low-end Android market, but Intel hopes things will look up with its later, more capable chips.
