Tabletop Simulator, the very uncommon physics sandbox game that deals with the accurate simulation of a table top, is now available on Steam Early Access. The game has been creating quite a few ripples ever since its announcement. The game started its journey on Kickstarter which it quite successfully completed and is now headed for a full release on Steam.

The game is basically a sandbox with the sole purpose of simulating all kinds of possible table top physics. Now the interesting part of the game is that it is kind of a blank table top over which users can put up any game that they fancy. Once set, the game can be played just like in the real world moving around the pieces as if on a real world. But the interesting part is that, just like in the real world, should you decide, you can rage flip the table, throw the pieces at your opponent or just push the table over!
