“We are expanding the work we already do for the Linux kernel to other projects that may need support,” said Jim Zemlin, executive director of The Linux Foundation. “Our global economy is built on top of many open source projects. Just as The Linux Foundation has funded Linus Torvalds to be able to focus 100% on Linux development, we will now be able to support additional developers and maintainers to work full-time supporting other essential open source projects. We are thankful for these industry leaders’ commitment to ensuring the continued growth and reliability of critical open source projects such as OpenSSL.”
