Spain's largest hospital chain, Quirón, will be piloting a portal based on the Openstack open source cloud computing solution, to provide patients with access to their radiology data. The pilot is one part of a three-year research project called Coco Cloud, which in 2013 received a 2.8 million euro grant from the European Commission's FP7 funding programme. Some of the requirements for the secure cloud-computing environment will be formulated by Italy's governmental ICT resource centre, the Agenzia per l'Italia Digitale (AGID).
