The founder of open-source Drupal content management system details how the 100-year evolution of photography can inform open-source development and the upcoming Drupal 8 release.

It took more than 100 years of evolution for the modern photography industry to reach its current state, and there are lessons from that century that apply to the modern world of cloud and Web development too. That's the message delivered by Dries Buytaert, founder of the open-source Drupal content management system (CMS), during his keynote address at the Drupalcon conference June 3 in Austin, Texas.
