[Linux Kernel 3.14 Breaks Wine for 16-bit Windows Applications](#) [8]

Linux users need Wine to run applications from the Windows platform, but the bulk of apps accessed in this way is actually quite old. Sure enough, it's possible to run newer software as well, but most users need Wine for much older stuff.

One of the latest updates for Linux kernel 3.14.x brought some modifications and users found out that they couldn't run Wine configured as Windows 9x, which is actually an important option.
