Another day, another small-form-factor PC. This one, the pcDuinos3S, meets that fine line between budget-friendly and usable, being priced at \$99 and able to run either Android or Linux, depending on your needs. We've got a rundown of its features after the jump.

The pcDuino3S is a case-toting alternative to the slightly cheaper and case-lacking pcDuino3, which is sold for \$77. With the 3S model comes the same features, as well as a white box around the board that saves those without DIY inclinations some hassle.
