Telecom service providers are being asked in multiple ways to put their money where their mouths are when it comes to supporting open source software and technology in the move to virtualization.

The most obvious move those willing to embrace openness will make is joining the new open source project -- called Open Platform for NFV, or OPN -- that a number of telecom operators associated with the ETSI Network Functions Virtualization Industry Specification Group are setting up with the Linux Foundation , already home to OpenDaylight . (See [Is Open Source the New De Facto Standard?](#))
