- **[Warsow 1.51 Brings GLSL, Multi-Threaded Sound, Engine Improvements](#)**[3]

   I just noticed Warsow 1.51 was released earlier this month and this open-source first person shooter has some decent changes for being a release coming not too long after the introduction of Warsow 1.5.

- **[Calibre 1.41 eBook Reader and Editor Now Features Better Metadata Management](#)**[4]

   Calibre 1.41, an eBook reader, editor, and library management software, has been released and comes with a few very interesting features, including a new tool for setting the metadata.

   Calibre is a software that serves many purposes and can be used as an eBook conversion tool, eBook reader, eBook editor, and much more. One of the most important functions of the application is metadata management, which is crucial when dealing with eBooks.

- **[Top 4 Linux VoIP clients](#)** [5]

   It?s easier than ever to get your own SIPs account, whether you?re making it through Ekiga, a third-party site or even setting it up yourself on a home server. Jitsi is the app that gets the very most out of whatever you set up, even if you don?t plan to use SIPs. Thanks to its ability to connect to other chat services, it becomes an all-in-one chat and IM client for however you

want to contact people.

The sheer wealth of settings available in Jitsi is also astonishing, allowing you to tweak specific timeout, port and other connection settings you may never actually need to change. The rest of the clients did not offer settings nearly this deep, and the codecs available were definitely a plus.

- **w: Plus a little rant** [7]

  We need to talk. If you?re a software designer or a programmer of some merit, we really need to have a quick discussion about your application.

  Over the past year and a half or so, I?ve been scraping the landscape for text-based programs and trying them out for fun. It?s one part hobby, one part attempt to build something like a directory of available software, and one part pruning away the things that don?t work at this point in history.

- **Opera?s Chromium-based Web browser is now available on Linux**[8]

- **Opera 24 Dev Lands on Linux and It's Blazing Fast ? Screenshot Tour** [9]

  The Opera Internet browser has finally received a new Linux version, bringing it almost up to date with the Windows and Mac OS X platforms.

- **Opera Finally Sees New Linux Update With Opera 24 Developer Stream**[10]

  Opera web browser hasn't been updated for Linux since version 12.16 (about a year ago) - until today, when the Opera desktop team announced that they released Opera 24 for Linux on the Developer stream...
