Up for your viewing pleasure today were some quick benchmarks done of the next-generation KDE desktop stack compared to the KDE 4.13.0 and Unity 7.2.1 desktops of Ubuntu 14.04 LTS.

For delivering some early preview figures of KDE Frameworks 5 with Plasma-Next, I used the Project Neon PPA recently to test out the full-screen Linux OpenGL gaming performance to see if it was affected differently than KDE4 or Unity. Much more in-depth testing will come when the next-gen KDE stack has been stabilized, but this should serve as some interesting preview figures.
