With Rygel, users will be able to browse the media collection from the TV or PS3 on a PC running GNOME, and they will have the possibility to play any of said media.

This is a very interesting application because it does something that very few others manage to do on the Linux platform. A few years ago, Rygel wasn't really being used at its full potential because there weren't too many devices, like Smart TVs for example, that would require users to have a working media server.

The prices for Smart TVs have dropped dramatically in the last couple of years and more Linux users are now looking for a media server solution. Unfortunately, there are few media servers out there and some of them even charge a price for the premium features...
