Google is working to bring Chrome OS and Android closer together, and that'll eventually mean having Android apps running right on a Chromebook. "We're in early days," Sundar Pichai, Google's Chrome and Android chief, said on stage today at Google's I/O developer conference. Pichai didn't say when the feature would arrive, but he demonstrated it already working using Android apps for Evernote, Flipboard, and Vine. The apps can appear in a tall, phone-sized window, or they can be expanded to run as they would on tablets.
