It's barely a day later and we are already seeing another release of one of L's main features. As part of L's new ?Material Design? interface Google had announced the use of a ?Heads Up? function. In short this is an update to the way in which notifications are received (and viewed) by a user. With Heads Up installed and once a user receives a notification (email, text, service update etc) the user will be able to see a brief image of the notification's content.
