So last month we saw the release of CM 11 M7 as a Snapshot. Again, those of you who are new to CM a ?Snapshot? is a nearly-stable release. This type of release is considered safe-to-use by CM and believed to contain all features and all bugs worked through. It is worth remembering being a Snapshot this does mean it is possible some unknown bugs may still exist although these will be minor. Now already we are seeing the next major release available today. CM 11 M8 was released this morning and offers Android 4.4.4. As the release has only just been made public the devices supported are rather limited although the variance will grow quite quickly knowing CM.
