Every year, the Top 500 list of the world's fastest supercomputers is released. A list filled with machines containing tens of thousands of nodes and capable of cranking out enough petaflops per second to make your head spin.

And, of course, this list is absolutely dominated by machines powered by Linux.

This is awesome. But, really, we all know this. Let's dig a little deeper into these Goliath computers that will, someday, become sentient and rise up against their human creators.
