Submitted by Roy Schestowitz on Wednesday 16th of July 2014 09:41:30 AM Filed under [Debian](#) [1]

Building Linux Mint 17.1 on the same code base as Linux Mint 17, the developers have more time for improving the already existing Linux Mint specific applications and implement newer desktop environments until 2016, while security fixes will be implemented five years from now.

Also, by creating point releases, the users will be able to easily get the latest updates (if the systems use the same code base) from the command-line, by performing regular system upgrades, or get the Linux Mint 17.x images, which already contain the latest versions of the packages.
