For long-suffering Linux users who have endured the dearth of high-quality action games on their open source desktops, the wait for better game developer support soon may be over.

New technology is making Linux more attractive to game makers. In fact, it may keep Linux under the hood, so players will have no clue Linux is inside.

Until now, game makers have relied primarily on Windows PCs and gaming consoles powered by proprietary alternatives to the Linux OS. However, Linux-based systems specially designed for gaming are on the rise.
