TouchPico is prepping an Android 4.2 mini-PC that doubles as a pico-projector and approximates touch input via an infrared stylus and camera.

It's not enough to offer just another straight-ahead pico projector these days. Sprint's recent, ZTE-built LivePro, for example, doubles as a mobile hotspot and features an embedded display, and Promate's LumiTab is also a tablet. Now a startup called TouchPico offers a similarly Android-based TouchPico device that adds touch input to projected images.
