This is a simple story about a logo design process for an open source project in case it might be informative or entertaining to you.

A little over a month ago, Tomas Redej contacted me to request a logo for DevAssistant. DevAssistant is a UI aimed at making developers' lives easier by automating a lot of the menial tasks required to start up a software project ? setting up the environment, starting services, installing dependencise, etc. His team was gearing up for a new release and really wanted a logo to help publicize the release. They came to me for help as colleagues familiar with some of the logo work I've done.
