This was a GSoC project of 2013, but the patch provided by the student was never in an *upstreamable* state. Again Germán, who always loved this feature, took care of the patch addressing my review comments. At the beginning of the hackfest most of the work has already been done, we only needed a few more review iterations during the hackfest to finally push this feature to master. The idea is to show the list of recent documents as an icon view with thumbnails and documents metadata. This view is loaded when evince is launched without any document replacing the useless empty window we had before. It also replaces the recent documents submenu in the gear menu.
