GNOME has, for some reason or another, always been the default desktop environment in Debian since the installer is able to install a full desktop environment by default. Release after release, Debian has been shipping different versions of GNOME, first based on the venerable 1.2/1.4 series, then moving to the time-based GNOME 2.x series, and finally to the newly designed 3.4 series for the last stable release, Debian 7 "wheezy".
