For good or bad, it sure seems like time flew by the past few months of the Ubuntu 14.10 development cycle; the feature freeze for the Utopic Unicorn is this week.

On 21 August is the Ubuntu 14.10 feature freeze while next week marks the beta one release for the Ubuntu 14.10 flavors opting into doing a beta release -- Ubuntu itself still doesn't do betas but Canonical encourages testing at will of their daily live ISOs.
