Canonical's specific involvement with the Khronos Group isn't listed and we haven't seen Canonical names closely associated with any major specs out of the different working groups to date. However, Oliver Ries, the Head of Engineering Product Strategy at Canonical, wrote into Phoronix that they joined the group for pushing their display server agenda with trying to work towards an underlying driver standard for Mir/Wayland. Oli noted in his email, "Canonical has joined Khronos in order to help establish the necessary driver standard that is required for Mir (and Wayland) to succeed. We have specifically contributed to the current standard proposal/draft."
