Stealth.com has launched four rugged mini-PCs based on 3rd Gen. Intel Core CPUs, featuring four gigabit ports, Ubuntu, and optional PCI and PCIe expansion.

The four new LPC480x models are the latest members of the Little PC family of mini-PCs from Stealth.com (formerly Stealth Computer), which include the circa-2011, Intel Atom D525 based LPC-125LPM. The company sells about 50 different LPC models available with Windows or Ubuntu Linux. The systems are designed for embedded control, digital signs, kiosks, mobile navigation, thin-clients, POS, and Human Machine Interface (HMI) applications.
