I'm a big fan of Scott Nesbitt's writing, which has a technological bent, but is usually more about working effectively, rather than how tools can make you effective, which is a key distinction. Scott's setup reflects his focus on production rather than tweaking. He has his work tools and everything else is pretty much white noise?which is why LXDE/Lubuntu probably makes a lot of sense for his workflow.

It's simple and it stays out of his way. Scott also gets bonus points for moving his family to Linux. That's a tough move, but given that his wife stole his ZaReason laptop, the conversion seems to have taken.
