While normally one might expect high end phones to get the latest and greatest features first, this time we see a bit of a surprising reversal. The Desire 510 is HTC's first 64-bit phone, and the first announced device with Snapdragon 410. For those that aren't familiar with Snapdragon 410, it has four Cortex A53 CPU cores running at 1.2 GHz, along with an Adreno 306 GPU which suggests that it is a mild modification of the current Adreno 305 GPU that we see in the Snapdragon 400. Overall, this should make for a quite fast SoC compared to Snapdragon 400, as Anand has covered in the Snapdragon 410 launch announcement.
