Nowadays, with more and more governmental censorship (and with it getting worse by the day, just look at Slashdot's privacy section) and reports of hacking into major servers becoming almost a daily occurrence, we all want the maximum security and privacy possible online. Thankfully, some great free software projects have risen to the challenge! Here are some simple steps to keep your "stuff" safe:

The first thing you'll want to get is Gpg4win. Gpg4win's excellent installer will automatically download and install all the components you need to generate public and private keys, sign and encrypt documents, emails and files; decrypt and verify your documents, files, emails and more!
