- [Let?s contribute Peru with GNOME](#) [2]

After that Cesar Fabian started the code contribution part, because all of them were interested in GNOME developer technologies. We started with glib, based on the GLIB Website. He explained us that Glib is a GNOME library written in C. We did a couple of examples: Hello Word and Lists of Fruits, using glist. Glists are linked lists that use the type void *. It was also explained values and basic types like gboolean where ONE represents TRUE and the rest of values are FALSE .

- [GNOME 3.18 to Drop Support for Yahoo!, Foursquare Will be Enabled by Default](#) [3]

Debarshi Ray, a renown GNOME developer, announced the immediate availability for download and testing of a new development release of the GNOME Online Accounts component of the upcoming GNOME 3.18 desktop environment.

- [GNOME Disk Utility 3.17.2 Fixes Benchmarking of Disks on 32-Bit Architectures](#) [4]

The GNOME Project is hard at work these days preparing for the release of the second milestone of the upcoming GNOME 3.18 desktop environment, due for release later this year on September 23.
