The materials sprint has many advantages when developing course materials. In addition to the very real benefit of developing additional ways for instructors to involve students in open source, the camaraderie of group development provides motivation and makes the experience fun!

Group development provides additional input into the activity development, while also providing additional eyes to proof and test the activity ?similar to another FOSS motto that "given enough eyeballs, all bugs are shallow." Involving industry professionals brought another set of benefits?their industry experience allowed us to make the activities more relevant and meaningful for students.
