Last Thursday night I installed my new hard drive and set up my computer so that it would dual-boot between Windows XP and Ubuntu 6.06 (Dapper Drake). Given that Debian (the Linux distribution Ubuntu is based on) had taken me days to install and configure, I figured that this might end up being a weekend-long project. It wasn't; both Ubuntu and Windows XP were fully functioning after less than 5 hours of work.

Since I had to install both Windows and Ubuntu from scratch, this seemed like a perfect opportunity to compare the two operating systems' basic installation procedures. Thus, I tracked the time it took to carry out all installation tasks for both operating systems, and report the results below.

Partitioning plan

As I'm configuring my computer to dual-boot between two operating systems, partitioning the hard drive is not as simple as if I was installing a single operating system.
