As mentioned in the beta release notes, the kernel in RHEL 7.2 contains a rebased LIO kernel target, to the equivalent of the Linux 4.0.stable series.

This is a big update. LIO has improved greatly since 3.10. It has added support for SCSI features that enable VMWare VAAI support, as well as data integrity (DIF), and significant iSER work, for those of you using Infiniband. (SRP is also supported, as well as iSCSI and FCoE, of course.)
