- [Six-legged, Ubuntu-powered spider drone is coming](#) [2]

Erle Robotics, a Spanish company that makes robots, mainly drones, has started an Indiegogo campaign for their spider drone, called Erle Spider. This is the first legged drone powered by Canonical's Snappy Ubuntu Core.

Erle Robotics is trying to raise \$50,000 through the campaign in 45 days through different packages or perks. The best package for those enthusiasts who like 'do-it-yourself' is for \$399. It will get you one spider kit for assembly; the kit comes with all needed parts. Those who are not into DIY can pledge \$569 and a fully assembled, ready to crawl spider will be delivered to their doorsteps. The most expensive tier of the campaign is the \$11,600 university pack, which buys 30 Erle Spider DIY Kits and comes with full tech support.

- [Spiderlike bot's controller runs Snappy Ubuntu on Raspberry Pi 2](#) [3]

Erle Robotics has launched a six-legged Erle-Spider robot on Indiegogo, with an Erle-Brain 2 controller that runs Ubuntu Snappy and ROS on a Raspberry Pi 2.

- [Ubuntu-Powered Erle-Spider Land Drones Now on IndieGoGo with Promotional Price](#) [4]

The Ubuntu-powered land drone Erle-Spider is now on IndieGoGo and its makers are trying to raise enough money for manufacturing.
