QUIETLY but surely, last week marked an important milestone, with traffic at the back end (not the cache layer*) exceeding 1.8 million hits, thus establishing a new record. So far this week it looks as though we are going to break this record again. We hope that the new format, which places emphasis on high importance links (as standalone nodes) and puts less important links in topical groups (grouping like games or howtos), makes reading the site more convenient and makes keeping abreast of the news easier, without getting overloaded in a way that is not somewhat manageable (links inside groups are typically less important, as intended). We're open to any suggestions readers may have to ensure we remain a leading syndicator of GNU/Linux and Free/Open Source software news. Any feedback can improve the site. [?](#)

* It is difficult to measure what happens at the Varnish layer as it's shared among several domains, including *Techrights*
