THE LINUX FOUNDATION has launched its latest initiative to bring the tech sector closer together. This time, its sights are set on supercomputing or high-performance computing (HPC) if you're not into the whole brevity thing.

- [Linux Leaders Join HPC Devs on Open Source Framework](#) [6]

The project will provide a new open source framework to meet HPC's unique application demands and parallel runtime requirements, the organization said.

The framework will provide upstream project components, tools and interconnections to enable the software stack. The HPC components will contribute to a full-featured reference

software stack for developers, system administrators and users.
