- **FOSDEM '16 -- Call for Participation** [2]

  FOSDEM 2016 (the free and open source developer's meeting in Brussels, Europe) will feature a new track on Containers and Process isolation. Therefore, we invite developers and users from the containers community to join us for this track and present your talks or demos.

- **VMware Open Sources Photon Controller For Container Users** [3]

  VMware's Photon Controller became open source code Nov. 16 in a bid to attract container users who wish to deploy containers with a microvisor.

- **It?s NotABug ?** [4]

  As Gitorious recently faded away, we have been searching for a Git Hosting solution for our FSFE Localgroup Zurich. We have evaluated several options including self-hosting. The latter has been tested with a software called GitBucket but it seems that a lot of recourses are required for that. At least it does not work well on my Atom-based Server.

- **The force is with us!(So Close!)** [5]

  Here we have a lot of long runs *(prints with more than 4 hours) hope that you enjoy it ! The

material used is ABS provided by our sponsor, ?Filamentos 3D Brasil?, thanks a lot fot the stuff and support guys!

- **Camel in a Hat: perl-CryptX package** [6]

  I'm going to package CryptX Perl module [1] soon.

- **rough code and working consensus** [7]

  On their better days, standards groups follow a principle of rough consensus and working code. Somebody builds something, announces it to some friends and maybe a few competitors, and says, hey, if you build something similar, it?s possible for our implementations to interoperate. Everyone?s a winner. Sometimes the design isn?t perfect, but the fact that at least one person/group has built an implementation is an existence proof that it can be built. Valuable knowledge to have.
