- [First January Fedora meetup in Pune](#) [2]

Last Friday we had the first Fedora meetup in January here in Pune. This was the first of the many upcoming meetups/workshops. The venue for this meetup was moved to Sayan?s apartment as we never found a free meeting room in the local Red Hat office, and as it seems that we will continue to use the same venue for the future meetups.

- [Fedora Linux Might Drop Incremental Upgrades, Let Users Skip a Release](#) [3]

Fedora developers are currently discussing the possibility of a new upgrade method for future versions of the operating system that might allow users to skip a certain Fedora release and upgrade to the most recent version available.

- [Fedora 24 Dropping i686 Server Support! | Release Schedule](#) [4]

- [The AWS tools are approaching Fedora](#) [5]

In the last few weeks I?ve worked toward bringing the Amazon Web Services tools in Fedora. The three AWS tools that are coming in the next few days in Fedora are: botocore: a low level Python library to interact with Amazon Web Services APIs boto3: a high level Python library to interact with Amazon Web Services APIs awscli: a Command Line Interface to interact with Amazon Web Services APIs Botocore just landed in Fedora updates repositories while

boto3 and awscli will be pushed to the updates repository tomorrow or Monday morning.
